## BULLETTIN N.10/2016

### Safety at work: the importance of training

The Italian legislature in the field of safety rules at work in recent years has given a great deal of emphasis on education.

The importance which the legislature attaches to the training are already in the definitions (Art. 2 of Legislative Decree no. 81/08 co. Aa):

" 'Formation': the educational process through which to transfer the workers and the other entities of the skills system of prevention and corporate security knowledge and procedures useful for carrying out the acquisition in the security of their duties in the company and to the identification, to the reduction and risk management; "

The concept of "educational" process would mean an activity with continuity. Something different than indicated in the agreements State Regions on training based on a initial training (general part and specific risks) over a period of renovation to be carried out within a maximum of five years of minimum 6 hours.

The concept of "acquisition of skills to safely conduct of their duties in the company and to the identification, reduction and risk management", presupposes that training, alone, is able to govern the future conduct of the worker, putting it safely.

Unfortunately this does not correspond to reality but doing more practical training and especially frequently checking and correcting the behavior of workers with appropriate techniques, you will get positive results
